MS50-7R TWIST SHIFTER INSTALLATION

MICROSHIFT

TOOLS AND SUPPLIES:

Tools and Supplies	1
--------------------	---

INSTALLATION:

1	Setup the cockpit	2
2	Proper shifter position	3
3	Tightening the shifter	4
4	Cable Routing	5

- 1 Hex Wrench Set

1 SETUP THE COCKPIT

1/1

Start by standing over the bike on flat ground. Install the brake lever and then the shifter onto the handlebar. Adjust the brake levers to your preference.

2

2 PROPER SHIFTER POSITION

1/1

Route the **barrel adjuster** above the brake lever. This allows the gear indicator face the rider.

3

Tighten the clamp bolt to **2.5 Nm** using a 2.5mm hex wrench.

Rotate the shifter forward until you feel a gentle stop. This puts the shifter in the smallest cog or smallest chain ring position.

Slide the brake lever over to reveal the cable port.

Route the cable into the cable port and out through the barrel adjuster.
